

BIOGRAPHY

Dr. Bise's 25-year career spans insurance, clinical, and academic settings. Academically, he is a published author with 20+ publications. His publications have addressed the cost effectiveness of interventions for knee OA, the reliability of physical exam procedures, the implementation of quality improvement initiatives and the theoretical concepts surrounding the treatment of low back pain. As a consultant Dr. Bise has leveraged his clinical and academic experience to champion value-based initiatives for musculoskeletal care including the implementation of data driven quality metrics. His current research focuses on the influence of the first provider seen for low back pain and the influence on subsequent resource utilization. This research has expanded into all musculoskeletal diagnoses and disorders as well as the influence of Emergency Department use for dizziness and falls. When not at work, Dr. Bise can be found shuttling his children to sporting events or trying to relive his youth as an aging lacrosse and hockey player.
